DESIGNING THE IMAGE OF THE FUTURE

FOLLOW US

MPM MARINACI PROJECT is a company that has been operating in Veneto for several decades and is an authorized partner which is recognized by internationally renowned companies. We design and construct building envelopes, all types of facades, steel and aluminum structures.

Our core business includes:

- ✓ Ventilated aluminum facades
- ✓ Metal and Alucobond cladding
- ✓ Fiber cement coatings and HPL
- ✓ General metallic carpentry
- ✓ Standing seam metal roofs

If you can think it, you can print it.

Turn your ideas into unique large-scale decorative projects with countless finishes, also available in sample format!

A wide variety of styles and formats allows us to transform imagination into reality. Give your buildings new life and character thanks with the exclusive design of a highly versatile and indestructible material!

MPM offers the supply and installation of ventilated facades in HPL or aluminum with both visible and concealed fixtures.

This includes on-site surveying, design, development and optimization of materials with top of the line software to guarantee minimal waste and ensure a quality product at a highly competitive price that guarantees maximum performance and high energy efficiency over time!

Supply and installation of metal cladding systems including: Alucobond, Steel, Aluminum.

Special materials such as Corten, Cotto Fiorentino bricks, ceramics, stone, and special cladding such as standing seam roofing are also available on request.

On-site surveying, design, development and optimization of materials is always included in order to guarantee minimal waste ensure a quality product at a highly competitive price.

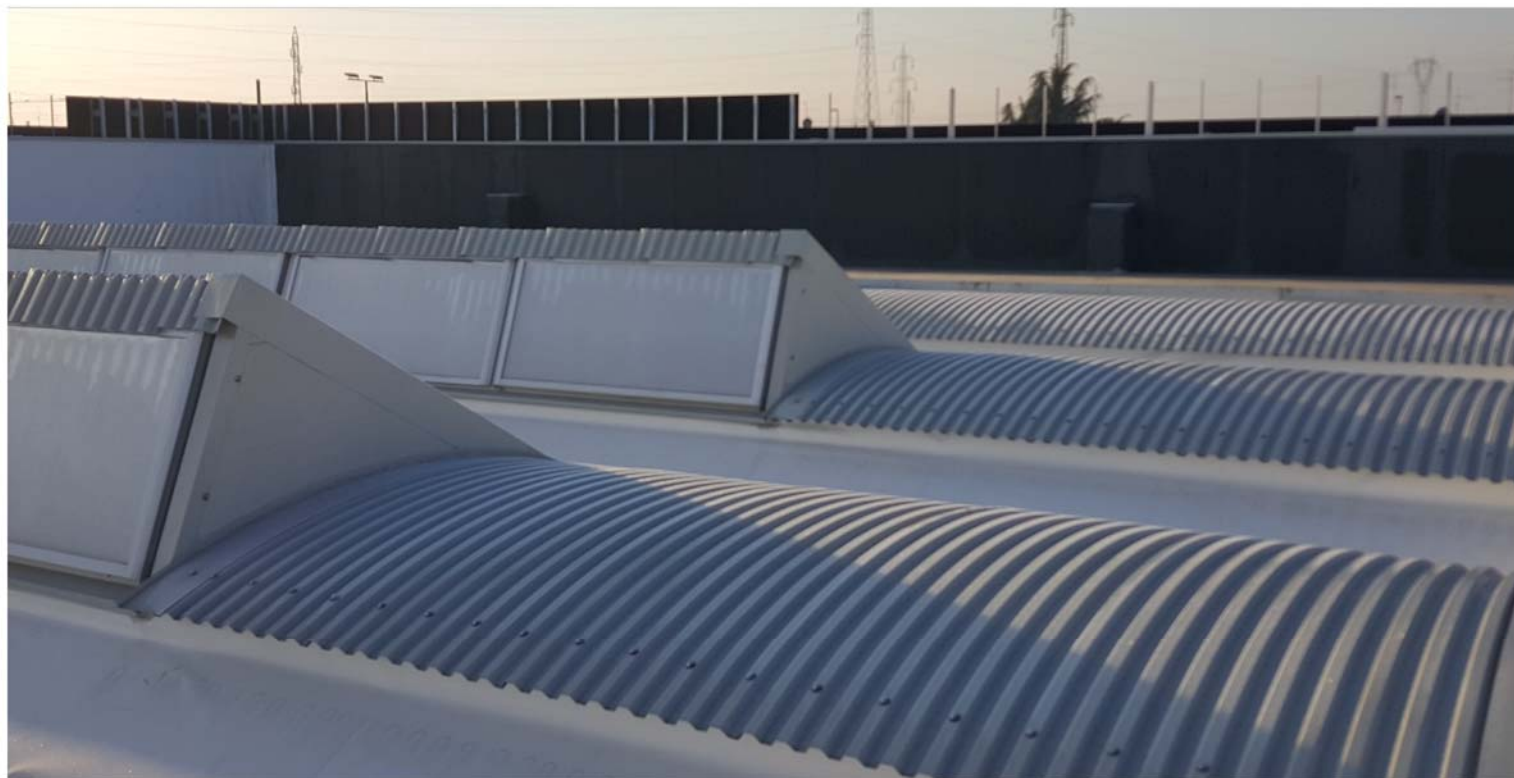

Our suppliers always provide the supply and installation of the supporting metal substructure certified by a system that guarantees durability and energy savings over time, mainly due to increasingly efficient air spaces.

Our facilities are always certified according to current **UNI** standards and accompanied by a calculation report drawn up by one of our qualified engineers.

The **MPM MARINACI PROJECT** prides itself on its extensive **experience and professionalism** in construction, in a variety of sectors and works on various types of steel, stainless steel (Inox) and iron structures used for buildings such as:

- ✓ Industrial warehouses
- ✓ Spatial reticular structures
- ✓ Civil buildings
- ✓ Shopping centers
- ✓ Sports facilities
- ✓ Telescopic or transparent roofing for public spaces and sports or recreational centers
- ✓ Construction of parking areas
- ✓ Large walls and metal roofs
- ✓ A wide variety of other important metal carpentry

The **MPM MARINACI PROJECT** offers design, production and assembly of metal products of different types such as the following:

- ✓ Residential metal roofs
- ✓ Show rooms
- ✓ Industrial warehouses, including all the different types of cladding.

The roofing can be composed of different materials, such as copper, aluminum, steel, zinc-titanium etc. Roofs built with our systems are always ventilated roofs that meet all advanced energy saving criteria since in the roof package we also include the substructure for the creation of the air space, the thermal insulation with specific types of minerals wool and a heat-sealed, breathable vapor barrier that acts as a protective layer in order to guarantee a perfect seal against internal condensation and external rainwater.

The **MPM MARINACI PROJECT**, thanks to the team in its technical office, is able to guarantee specific partnerships of high design with other partners related to:

- ✓ Design of facades, metal cladding and various carpentries
- ✓ Calculation Reports by qualified engineers
- ✓ Topographic land surveys
- ✓ Project rendering
- ✓ Construction site measurement calculations
- ✓ Assistance to installers on site

A surveyor with demonstrated experience will carry out site visits and site manager services in the management of important construction sites, thus ensuring that all activities are completed to perfection. Upon request he or she will also prepare all the various Progress Report documents both to the customer and to the suppliers / subcontractors.

The site manager therefore guarantees an efficient and complete supervision service of the construction site.

MPM MARINACI PROJECT

DESIGNING THE IMAGE OF THE FUTURE

.....

"Architecture is none other than order, disposition, beautiful appearance, the proportion of parts between them, suitability and distribution."

(Michelangelo Buonarroti)
